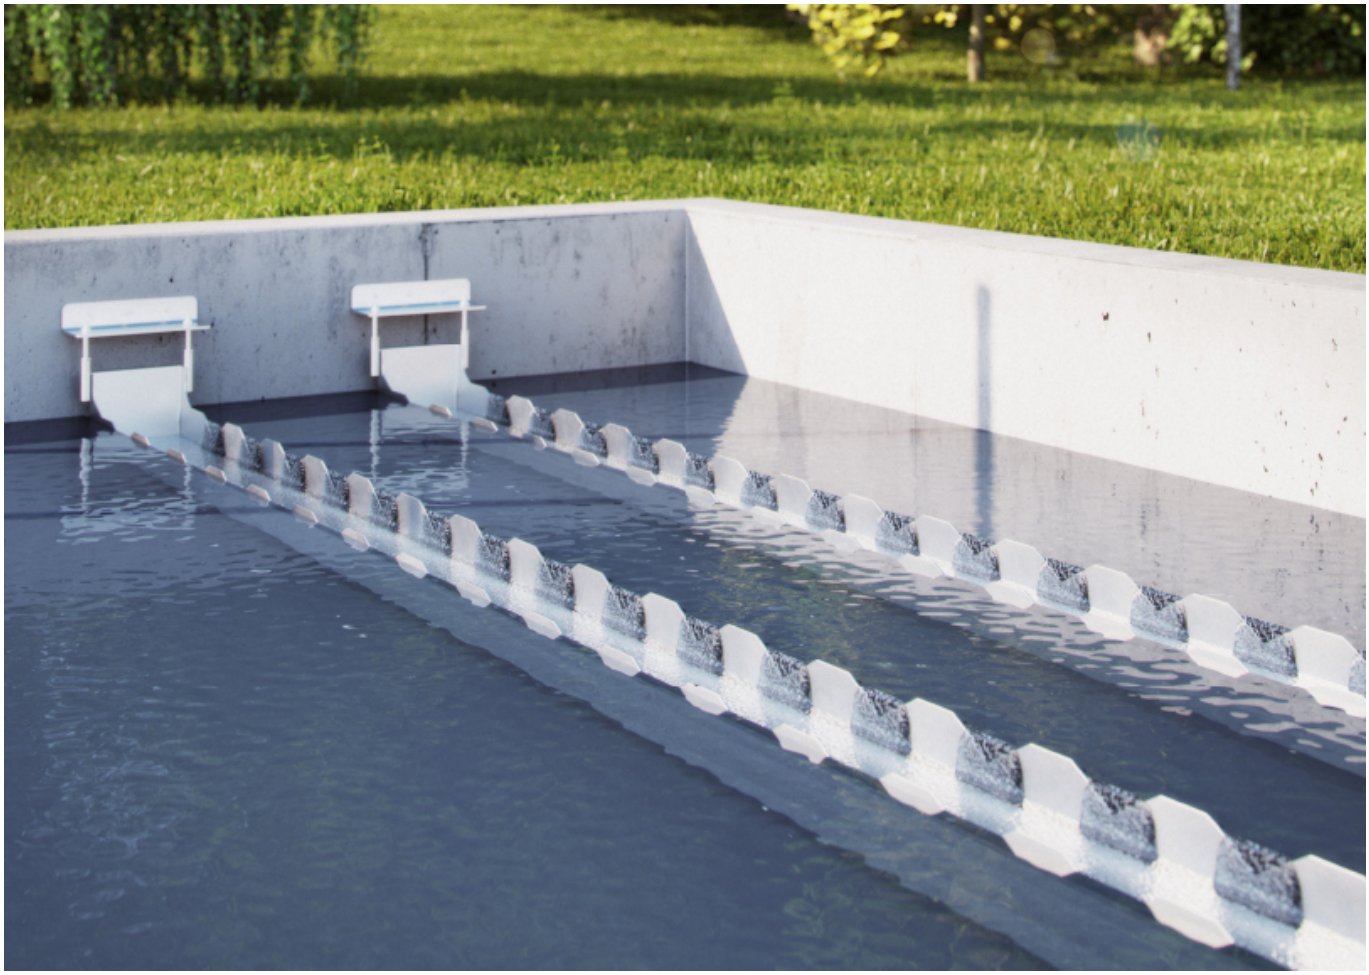
HYDRIA™ WATER



OUTLET WEIRS

Hydria Water's outlet weirs are used to remove surface water from sedimentation basins in the treatment of wastewater, in industrial treatment works, in the paper and pulp industry and in similar process applications.

HYDRIA™ WATER

OUTLET WEIRS

The outlet weirs are made from stainless steel with Thomson V-notches. They are supported at the edges by height-adjustable brackets mounted against the basin's concrete walls or overhead beams.

The outlet weirs are always dimensioned according to the specific needs of the customer or the facility. We manufacture solutions for all types of basins – circular or rectangular.

FUNCTIONS

- Application design for relevant flows and conditions to achieve maximum function and utilisation.

SPECIFICATIONS

Width	Upon request
